ARTIFICIAL INTELLIGENCE

Google DeepMind used a large language model to solve an unsolved math problem

They had to throw away most of what it produced but there was gold among the garbage.

Ozempic Maker Says AI Is Finally Reliable Enough to Produce Sensitive Documents

By Aaron Holmes and Jon Victor

Efficient Scaling and Delivering GenAI use cases across STADA was the main driver for our Global GenAI Platform

What?

- **Develop** and **scale** custom GenAI use cases across departments & teams

Why?

1. **Business need:** 200+ use cases collected in 2024 alone
2. **Speed:** Fast delivery of use cases
3. **Governance:** Standardised best practices (FinOps, re-use)

Who?

- Users from global and local functions at STADA

Where?

- Microsoft Azure

Bridging the Gap: Implementing Custom GenAI Use Cases at Scale required setting up a Custom GenAI Platform

GenAI Platform for Custom Use Cases

QUIZ TIME: What option should STADA pick for its Custom GenAI Platform, based on Microsoft Azure services & resources, allowing scalability & governance?

Deployment Type	Cost	Advantages	Disadvantages
Single AKS Cluster		+ Easier maintenance + Good use of resources	- High interconnection of services
Two AKS Clusters (LLM Hub + Use Case Platform)		+ Flexibility in use case management + Separation of systems	- Expensive fixed costs
Multiple AKS Clusters (LLM Hub + 1 Cluster per Use Case)		+ Strong independence of use cases + Operations & maintenance decoupled	- Very expensive scaling
Azure Container Apps		+ Pay-per-usage & efficient scaling + Simple to run	- Requires several components

What option should STADA use for setting up a scalable GenAI Platform on Azure?

QUIZ Time: What option should STADA pick for its Custom GenAI Platform, based on Microsoft Azure services & resources, allowing scalability & governance?

Deployment Type	Cost	Advantages	Disadvantages
Single AKS Cluster	\$24k/year for LLM Hub & all use cases	+ Easier maintenance + Good use of resources	- High interconnection of services
Two AKS Clusters (LLM Hub + Use Case Platform)	\$48k/year for LLM Hub & all use cases	+ Flexibility in use case management + Separation of systems	- Expensive fixed costs
Multiple AKS Clusters (LLM Hub + 1 Cluster per Use Case)	• \$24k/year for LLM Hub • \$24k/year per use case	+ Strong independence of use cases + Operations & maintenance decoupled	- Very expensive scaling
Azure Container Apps	• \$2k for LLM Hub • \$1k – 2.5k/year per use case (usage-based)	+ Pay-per-usage & efficient scaling + Simple to run	- Requires several components

The GenAI Platform's architecture allows STADA to be independent from the LLM provider and exchange it flexibly

**We have
done a lot:
AI @ STADA in 60 seconds**

The logo features the word "STADA" in a bold, blue, sans-serif font. It is centered between two thin, red, curved lines that arch over and under the text, resembling a stylized smile or a protective shield.

STADA

Caring for People's Health

1

Simplify your life with AI:

Build common AI capabilities at everyone's fingertips:
Scalable assistants and AI Agents available 24/7.

2

Local AI Acceleration to drive Top-line:

Enabling local markets in AI delivery by know-how transfer and democratization of AI capabilities in the countries for commercial/customer-facing processes.

3

AI-first E2E process re-design to drive Bottom-line:

Re-engineer core E2E processes where differentiation and ROI are highest; targeted AI invests in bespoke high-value use cases only

Process re-design in RAMACA: Efficiency and process acceleration

Challenge:

Managing complex variation and submission processes manually in a highly regulated environment, leading to inefficiencies and delays.

Solution:

Implemented GenAI-driven automation for document generation and submission workflows, reducing manual effort and errors.

Key Learning:

Foundation of STADA's future GenAI platform. AI-powered automation accelerates regulatory processes, improves compliance, and delivers significant time savings.

Faster regulatory processes and better data quality

AI for Commercial Excellence: Driving Sales, Marketing & eCommerce Impact

Challenge:

- Time-consuming shelf audits
- High costs and delays in content creation
- Complex local trainings

Solution:

- AI-powered multilingual educational videos
- AI-based Image Recognition in CRM
- AI-generated campaign content creation

Key Learning:

- Complexity in scaling trainings can be reduced significantly with AI.
- Voice-over and avatar technology enable high-quality, localized videos

Top- & Bottom- line impact

Boring Part

FinOps

The Tracking Service of the GenAI Platform provides us transparency over the costs and usage of the AI applications running on it via Grafana and LiteLLM
